

## Digital Satellite Finder Model: Televés 7301

### ADDITIONAL USER INSTRUCTIONS Please Read Carefully Before Use

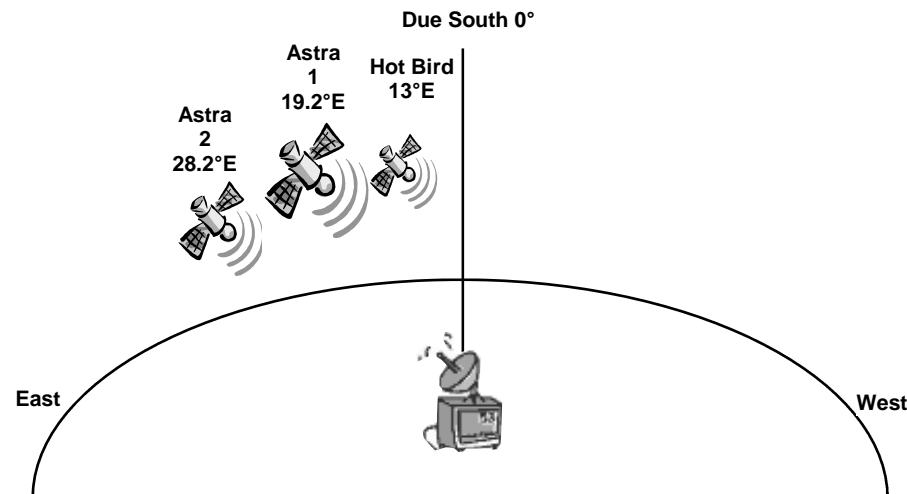

#### FINDING ASTRA 2 at 28.2° EAST (Sky/BBC)

When using the finder with a SKY “DigiBox” receiver, the finder is considerably more sensitive than the on-screen bar graphs displayed by the “DigiBox” test menu. It is therefore recommended to rely on the finder for finding the satellite. Also when the first signals are received by the “DigiBox”, it can take a few minutes to display a normal picture showing only a blue screen whilst it searches for listings. A check can then be made using the “DigiBox” TEST SCREEN to ensure the optimum signal is being received. ( See signal test screen explained).

Using the connect lead supplied, connect the finder between the ‘DigiBox’ and L.N.B. on your dish.

#### PRELIMINARY ADJUSTMENT

With the dish facing East set the meter reading to ‘2’ using the sensitivity control.

#### FINDING THE ASTRA 2 at 28.2° EAST CHANNELS

1. Whilst moving the dish slowly from East towards South and rocking it back and forth find and peak up on the first strong signal available i.e. Astra 2 at 28.2° East to give full scale reading on meter.
2. Reduce the meter reading with the sensitivity control then make final adjustments to the dish to achieve the highest reading.
3. Verify that you are receiving Astra 2 by using the Digibox signal test screen as detailed below.

The finder has No internal battery and does not require any maintenance. There are No internal user adjustments/parts.

#### SIGNAL TEST EXPLAINED

The “SIGNAL STRENGTH” bar graph indicates the relative signal level being received by the dish from any microwave source, the further to the right the better but can be misleading.

The “SIGNAL QUALITY” bar graph is the most important and again the further to the right the better.

The “LOCK INDICATOR” shows “OK” if the dish is correctly located on to Astra 2 and “NOT LOCKED” if otherwise.

The “NETWORK ID” and “TRANSPORT STREAM” display the following when receiving from the main three satellite systems.

Satellite System	Astra 2 28.2E*	Astra 1 19.2E	Hot Bird 13E
Network ID	0002	0000	
Transport Stream	07d4	0000	13e

\* Astra 2 North Beam is being received, however this is not the case if receiving South Beam only when the indications may be unpredictable.
